MEDIPLUS PHARMACY - MOBILE APPLICATION QA

Project Overview & QA Sandbox Strategy Brief

DOCUMENT CONTROL & METADATA

Client	MediPlus Pharmacy	SQA Engineer	Muhammad Huzaifa Waheed
Organization	Ezitech Software House	Deliverable	Task 1: QA Sandbox & Strategy Brief
Date	October 2026	Version & Status	v1.0 (Approved / Active)

EXECUTIVE SUMMARY & BUSINESS RATIONALE

MediPlus Pharmacy is digitalizing its healthcare services by developing a native Android mobile application. The application will empower customers to browse prescription and OTC medications, submit digital prescription refills, and locate nearby pharmacy branches with real-time operational hours.

Because the client's proprietary mobile build is currently under active development, an agile pre-production QA strategy has been established. The industry-standard Sauce Labs My Demo App (v2.3.0) has been deployed as the official QA Test Sandbox. This proxy environment enables the SQA team to define quality gates, build comprehensive test matrices, conduct exploratory testing, and establish automated regression suites prior to the final production rollout.

QA OBJECTIVES & SCOPE OF TESTING

Test Architecture: Establish standard operating procedures for mobile test execution, defect lifecycle tracking, and QA artifact governance.

Functional Scope: Validate medication catalog navigation, product search/filtering, cart management, digital prescription refill workflows, and checkout security.

Quality Attributes: Verify UI responsiveness, layout adaptability across display densities, crash resilience, and network latency handling.

Continuous Quality: Lay the foundation for automated regression suites and continuous verification via GitHub Actions CI/CD workflows.

SANDBOX TEST ENVIRONMENT CONFIGURATION

Parameter	**Specification**	**Details**
Target OS & API	Android 13.0 (Tiramisu)	API Level 33

Virtual Device	Google Pixel 4 Emulator	1080 x 2280 px (440 dpi), x86_64 architecture
Testing Platform	Android Studio Device Manager	Hardware acceleration (HAXM / AEHD) enabled
Test Binary (APK)	Sauce Labs My Demo App	mda-2.3.0-27.apk (Size: 17.4 MB)
Source Control	Git & GitHub	Public sandbox repository

6-PHASE QA DELIVERABLES ROADMAP

Task 1 (Completed): QA Repository Setup, Sandbox Acquisition & Strategy Overview Document.

Task 2: Demo App Functional Exploration & Comprehensive Test Case Matrix Formulation.

Task 3: Multi-Device Test Execution, Defect Identification & Bug Logging.

Task 4: 90-Minute Time-Boxed Exploratory Testing Charter & Structured Session Notes.

Task 5: Risk-Based Regression Suite Assembly & GitHub Actions CI Pipeline Execution.

Task 6: Final QA Deliverable Package Handover & Stakeholder Quality Report.

ARTIFACT REPOSITORIES & REPOSITORY LINKS

Public GitHub Repository: https://github.com/huzaifawaheed2/mediplus-qa

Sandbox APK Binary: Available in /app directory of the repository

Document Access: Exported as PDF and archived on Google Drive / GitHub Docs
